

Colibrico Design Studio

Presentation of the main functions with glossary

Step 1: Icon selection

Here you select the icons from several graphic styles and themes.

Step 3: Preview and Export

In the export window you get a preview and save the icon Set

Step 2: Design

In the Design area, you can change the appearance of the icon selection. You can either create your own design or use a design template.

Graphic style (Style)

A graphic style refers to the design e.g. Shapes = Monochrome symbols, Strokes = Symbols in line presentation

Theme

There are different themes for each graphic style such as Finance, production, medicine, communication ...

Basic graphic

A basic graphic is the main graphic or first graphic. The basic graphics are selected in the "Icons" window.

Overlay

An overlay is a second graphic placed over a base graphic. There is a predefined overlay list for each graphic style. An overlay list is displayed when you click a graphic style.

You can add additional graphics to an overlay list. To do this, select a theme. In the displayed list, select the desired graphic. Click on the symbol „star“ to add the graphic.

An overlay in the layer list can be replaced with another overlay. All settings for the overlay are retained.

To combine the basic graphics with all overlays, select the layer with the Overlay and then activate the overlay list via the toolbar of the layer list.

Design template

A design template includes graphics and design elements. All effects, positioning and color settings are also included.

With a design template you can apply a design immediately to a new icon selection.

The design template can also be used to store an icon selection to reuse it later.

Design elements

Design elements are backgrounds, shadows, frames and glow effects. With design elements, you design individual button sets. The individual elements are transferred to the layer list by double-clicking or drag & dropp.

Layer list

The Layers list contains all layers of a graphics composition. A graphic composition can be e.g. a basic graphic and an overlay, or a graphic and an effect or a basic graphic and several design elements.

Layer

A layer contains a basic graphic, an overlay, an effect, or a design element. The position of the layer can be moved with drag & drop. The order of the layer is important. A graphic should be over a background to make the graphic visible. If necessary, you can switch layers with the „Eye“ icon visible or invisible.
